 - Extended warranty
 - Access to Firmware upgrade
 - Advance replacement
 - Out-of-Warranty Repair
- Professional Services
 - 9-5 or 24/7 Professional Services
- Training Services

Surpassing your expectations...

We provide support for the following levels of severity:

Severity 1 - Critical

Conditions that severely affect the primary functionality of the product:

Product inoperability (outage); a severe reduction in the capacity / capability of the product, such that expected loads cannot be handled; safety hazard or risk of security breach; repeated degradation of an essential component or function; degradation of the product's ability to provide any required notification of malfunction or loss of system or subsystem redundancy.

Severity 2 - Limited

Issues or disturbances affecting a specific area of functionality including provisioning, operation and maintenance, but not affecting the whole system:

Any loss of administrative or maintenance visibility of the product and/or diagnostic capability; occasional system or application restarts; non-severe problems that may lead to loss of redundancy; a specific subsystem or feature of a service that is not fully operational.

Severity 3 - Minor

Other problems of a lesser severity than "Critical" or "Limited" such as conditions that have little or no impact on the function of the system such as:

Minor problems or usability issues with operation, maintenance or provisioning and documentation insufficiencies.

Based on the severity levels described above, the restoration and final resolution times vary as shown in the table below:

Severity level	Restoration time	Final resolution time
Severity 1 - Critical	8 hours	15 days
Severity 2 - Limited	20 days	45 days
Severity 3 - Minor	30 days	Next release

The restoration times defined by the TB Support team are dependent on the severity level assigned to the malfunction and the timing of the malfunction report.

Definitions

Response time is the time that elapses between the receipt of the issue report and the beginning of the problem analysis by a TB Support engineer. Response times varies depending on the support package paid. The end-user and/or partner will be notified as soon as the TB Support engineer starts analyzing the issue.

Restoration time is the time that elapses between the receipt of the issue report and the restoration of the system to its original state if the issue can be repaired by remote access and if the issue can be restored *without dedicated engineering support time*. The system is considered restored when a solution to the issue is delivered, even if the recommended measures are of a temporary nature, e.g. a workaround or reverting to the last working version including but not limited to the previous working network conditions.

Final resolution time is the time that elapses between the receipt of the issue report and the delivery of a permanent solution to the issue.

9x5 – During regular business hours for the TelcoBridges global service center in the customer’s geographic territory. Service centers are based in America and Asia.

24x7 – Any time on any day, irrespective of the customer geographic territory

Standard Support – Includes: remote guidance during initial installation, installation troubleshooting, software upgrades, patches, and basic configuration assistance. Does not include services outlined under Professional Services.

Professional Services – Includes: remote installation, advanced configuration assistance, switch-specific SIP configurations, routing tables configuration, routing scripts, 1+1 HA configuration, transcoding resource integration, network diagnostics, or other network-specific configuration or diagnostic work.

Advanced RMA Protection – Includes: expedited delivery of an identical factory remanufactured unit.
